What does a front-end developer do ?

To start with, a front-end developer creates designs, websites and applications using HTML, CSS and Javascript. They also determine where to place elements so it becomes easy for the user to interact with.

But how much does a developer earn ? Front-end developers can earn approximately 88.000$ a year. And why is that ? Because it's a really demanding job. It's a growing and flexible job, you can work on your own or for a company or even for a non-profit organization.

Moreover, because you work on a computer, you can work across the country or the globe. It also increases your creativity and problem-solving skills.

In order to work as a front end developer, you must acquire three main languages such as HTML, CSS and JavaScript. Furthermore, you should understand the frameworks and also how to use different software.

Having said that, if you want to learn front-end development, you can take online courses such as "Introduction to web development" and "responsive web development".

In conclusion, the front-end web development world is vast. You need to create flexible and intuitive interfaces by using three main languages and you should also acquire other skills such as frameworks or different software. You will also develop your mind and your creativity.
